## **INSTALLATION INSTRUCTIONS**

### **PRO-JUST\* PJ-1, PJ-2**

ALUMINUM BODIED OIL PUMPS (72-UP)

PJ-1

PJ-2

#### **INSTALLATION INSTRUCTIONS**

- (1) Remove the stock pressure relief cap. This cap is located on top of the oil pump's pressure relief valve chamber. (tall chamber). **Do not** install the Pro-Just on the tappet screen. If in doubt, Call us!
- (2) Remove the stock pressure relief spring. Install the blue "Superpump" spring that came with the Pro-Just.
- (3) Install the Pro-Just with the teflon gasket (PJ-1) or O-Ring (PJ-2) that is supplied. Do not overtighten the Pro-Just, a snug fit is fine. **DO NOT USE VISE GRIPS! USE OF VISE GRIPS VOIDS ALL WARRANTIES!**

#### **IMPORTANT NOTES**

- (1) Adjustment of the Pro-Just is done with the engine running. Turning the adjusting screw clockwise increases the oil pressure, counter clockwise adjustment decreases oil pressure. (Maximum recommended oil pressure is 36 p.s.i. after engine reaches normal operating temperature).
- (2) If engine is allowed to cool, return the adjusting screw back to a neutral position which is 1/8" (.125", 3.175 mm) above the body. This prevents the possibility of excess oil pressure.
- (3) If time has elapsed since your last oil change, now is a good time to change your oil and your filter. As this will effect your oil pressure and engine life. Remember, recycle your used oil!
- (4) If your oil pressure reads 0 p.s.i. before and after installing the Pro-Just, please check your pump completely for any broken keys or foreign matter.

**LIMITED WARRANTY:** E.R.T. Products warrants the Pro-Just for 1 year against breakage. Improper installation, improper use, improper maintenance or misuse of the product will void the warranty.

**DISCLAIMER:** E.R.T. Products shall not be liable for any consequential or incidental damages arising from the use of the Pro-Just.

**THANK YOU** for purchasing our Pro-Just!
