## **INSTALLATION INSTRUCTIONS**

### **SUPERPUMP-KIT SP-1**

ALUMINUM BODIED OIL PUMPS (72-UP)

#### **INSTALLATION INSTRUCTIONS**

- (1) Remove the stock pressure relief cap. This cap is located on top of the oil pump's pressure relief valve chamber. (tall chamber). **Do not** install the Superpump-Kit in the tappet screen. If in doubt, Call us!
- (2) Remove the stock pressure relief spring. Install the blue spring from the Superpump-Kit, first.
- (3) Replace the pressure relief cap that was removed in step 1.

#### **IMPORTANT NOTES**

- (1) Install the Blue spring first, start and warm engine to operating temperature. If this is not the desired oil pressure, stop engine and let stand for about ten minutes to relieve pressure. Start the procedure again using the Yellow spring, if not satisfied, use the Red spring.
- (2) Keep in mind that the outside temperature will effect oil pressure; i.e., hot weather, thinner oil; less oil pressure use the Red spring. In cooler weather conditions, use the Blue spring, with the Yellow spring being average.
- (3) If time has elapsed since your last oil change, now is a good time to change your oil and your filter. As this will effect your oil pressure and engine life. Remember, recycle your used oil!
- (4) If your oil pressure reads 0 p.s.i. before and after installing the SUPERPUMP-KIT, please check your pump completely for any broken keys or foreign matter.
- (5) We recommend running no more that 36 p.s.i. of oil pressure after the engine has been allowed to obtain normal operating temperature.

**LIMITED WARRANTY:** E.R.T. Products warrants the SUPERPUMP-KIT for 1 year against breakage. Improper installation, improper use, improper maintenance or misuse of the product will void the warranty.

**DISCLAIMER:** E.R.T. Products shall not be liable for any consequential or incidental damages arising from the use of the SUPERPUMP-KIT.

**THANK YOU** for purchasing our Superpump-Kit!
